

Aampe Terminology & Taxonomy

A Shared Reference for Core Concepts and Entities

Purpose & Context

“What’s in a name?” – a lot, actually. As Aampe matures and scales, consistent and simplified language isn’t just nice to have; it’s essential to a seamless UX and to how we think, build, and communicate about the system.

The purpose of this document is to:

- To define and standardize terminology used across Aampe’s platform, documentation, and conversations.
- To establish a clear hierarchy — from atomic units (like *alternates*) to system-level entities (like *audiences* or *triggers*).
- To encourage shared understanding and consistent language across teams (Product, Strategy, Customer, Engineering).
- To invite proposals for alternative terms with clear rationale.

💡 **Note:** This is not a glossary—it’s a **taxonomy**: a structured hierarchy showing how entities relate to each other and form the backbone of Aampe’s agentic content system.

[WIP] Entities and their Proposed Taxonomy

Below is a living section for debate and evolution of terms.

Instructions: Open this [Figjam](#), and add your vote to any ONE option from the 3 options below. You must also add in your reasoning/counterpoint against each. If none of the 3 options resonate with you, you are invited to add in another contender. However, please do this ONLY if you have very strong counterpoints against the first 3 options and a solid justification for throwing a new term into the mix.

[illegible]

No.	Entity description	Example(s)	Option 1			Option 2			Option 3			Parent	Child(ren)
			Term	Reasoning	Counterpoint	Term	Reasoning	Counterpoint	Term	Reasoning	Counterpoint		
10	Persistent user-level characteristics or states	"Language", "Subscription status"	Attributes									—	—

[WIP] Taxonomic Diagram

(Visual section placeholder – *Madhuri Maram* need your help here)
A hierarchical or graph-style map showing dependencies, like:

- Alternates → Components → Messages → Message Groups → Audiences/Triggers.
- Labels intersecting all content layers as learning scaffolds.
- Events and attributes feeding agent learning loops.

[WIP] Detailed Entity Definitions (To be filled in later)

Entity Name

Definition:
Plain-language explanation of the entity.

Primary Role in System:
How it contributes to agentic learning or personalization.

Relationships:

- **Parent:**
- **Child:**
- **Cross-links:** (e.g., Labels connect across all components.)

Examples:

Provide practical Aampe examples (from demos or case studies).

Naming & Terminology Principles

- Use **plain language** that's clear across CRM, Martech, and Product teams.
- Each entity should have **one name and one purpose** — no synonyms.
- **Name for function, not format** (what it *does*, not what it *looks like*).
- Keep names **noun-based, singular, and title case** (e.g., "Workflow," not "Workflows").
- Follow the **atomic → modular → system** hierarchy in naming (Alternate → Component → Workflow).
- Avoid overlaps with legacy CRM terms like "campaign" or "journey" — use agentic equivalents ("Workflow," "Message Group").
- Prefer names that imply **learning and adaptability**
- Maintain **cross-functional clarity** — understandable to both marketers and engineers.
- Keep internal and external naming **consistent across docs, UI, and data models**.
- Allow debate, but require **clear justification** for any proposed rename (comprehension, clarity, or function).

✅ Summary: The Five-Second Test

When introducing or debating a term, apply this checklist:

Question	Yes → Keep	No → Revise
Is it cross-functional and human-readable?	✅	❌
Does it describe what the system <i>learns or does</i> ?	✅	❌

Can it be visualized in the hierarchy (atomic → system)?	✓	✗
Is there only one meaning in this context?	✓	✗
Does it avoid CRM legacy baggage?	✓	✗

🧠 Workshop Consideration

One thing to consider before we kickoff a company wide workshop is to gather common sense feedback and then integrate them into 3 various options:

Option 1: Taylor Swift Edition - based on votes and popularity (human readable)

Option 2: Shokupan Edition - Expertise focused wording

Option 3: Drift Edition - new category could mean new words too! So why not?

All our internal team members will vote on a public file and post that we'll have a workshop to hash out the specifics.

🧠 Tie Breakers

We nominate Ben, Ellie, Himanshu and Sami to be the tie-breakers for this project.
