

Product Glossary

The unified vocabulary for Aampe's core product entities, ratified at the company Terminology Session (Taiwan offsite, 2026). One name, one purpose, no synonyms.

The hierarchy: Alternate → Component → Message → Formula → Topic, with Eligibility Criteria and Events as the targeting and learning layers, and Tags intersecting every content layer as learning scaffolds.

Term	Definition	Example	Decision
Alternate	Smallest dynamic atomic unit of content, text or visual.	"Book now!", an image, a URL	Kept. Beat: Snippet, Variant
Tag Group	The category or type of the modular parts of a message, as listed in Tag management.	Offering, Value Proposition, Greeting	Renamed from: Label Type / Component Type
Component	A modular instance of a Tag Group used inside one message. Agents mix and match alternates within it.	The Value Proposition slot in a push	Kept. Beat: Component Instance, Dynamic Element
Tag	Defines the meaning or intent of textual or visual content. The unit agents learn user preferences from.	Convenience, Dollar Discount, Off-Season	Renamed from: Label
Formula	A collection of related message variants; the container that encapsulates all combinations.	Abandon Cart - Hotels (EN)	Renamed from: Message Group
Message	A single specific combination of alternates across components; what one user actually receives.	"Hi there! Start saving on your spends."	Renamed from: Message Combination
Topic	The organizing layer for content, linking multiple formulas under a shared use case or goal.	Airport Rides, Onboarding	Kept. Beat: Theme
Eligibility Criteria	Attribute or event-based criteria that define which users can receive a formula.	New users signed up in last 14 days	Renamed from: Audience
Event	User actions or system signals that agents learn from.	checkout_complete, screen_viewed	Kept. Beat: Behavior

Naming principles

- One name, one purpose. No synonyms.
- Name for function, not format: what it does, not what it looks like.
- Follow the atomic → modular → system hierarchy. Names stay noun-based, singular, title case.
- Avoid legacy CRM baggage (no "campaign", no "journey"). Prefer names that imply learning and adaptability.
- Keep internal and external naming consistent across docs, UI, and data models.
- Debate is welcome; renames require justification: comprehension, clarity, or function.

The Five-Second Test

Before any term is adopted, it must pass all five: (1) cross-functional and human-readable, (2) describes what the system learns or does, (3) can be placed in the hierarchy, (4) has exactly one meaning in this context, (5) avoids CRM legacy baggage.

Governance

New terms may be introduced for new functionality. Modifying an agreed term requires rationale and team consensus. Prevent terminology creep by using the accepted term over the one you prefer.
