

Website Rebuild Spec — Case Study Page

“Building an in-app Chat Assistant” — LazyPay — by Mohana Das

This document is a complete content + layout specification extracted from the original portfolio page (previously hosted on Wix, captured as a 10-page PDF). It is written so a developer or AI coding tool (e.g. Replit) can recreate the page as a single scrolling case-study page on a new website. All visible copy is reproduced verbatim in grey blocks. Blue blocks describe layout and structure. Pink blocks are placeholders for images/assets that will be supplied separately — reference them by their placeholder ID in the build.

Global Design System

LAYOUT & STRUCTURE

Single-page vertical scroll, generous white space, centered max-width container (~1000–1100px). Background: white. Base text: near-black (#1A1A1A). Accent: LazyPay pink (#D63B6C–#E5477D range) used for highlighted keywords, outcome tags and links. Typography: modern geometric sans-serif (original uses a Futura/Poppins-like face); headings bold, body regular ~16–18px. Section pattern used throughout: small emoji icon centered → centered H2 → centered supporting paragraph (max ~700px wide). Sections separated by large vertical padding (~80–120px). Sticky/simple top nav. Numbered process steps use blue “keycap” emoji icons (blue “keycap digit” emoji 1–4).

Page Header (site-wide)

LAYOUT & STRUCTURE

Slim white header bar with bottom hairline. Left: personal wordmark logo. Right: text nav links “About” and “Work” (uppercase, letter-spaced, small). Omit all Wix banner elements from the original capture.

[ASSET PLACEHOLDER: LOGO-WORDMARK]

Handwritten-script personal logo “mohana das.” in black ink style. Approx. 140×40px, transparent background.

Section 1 — Hero

LAYOUT & STRUCTURE

Two-layer hero: a large dark rectangular hero image sits right-of-center; a white content card overlaps it from the left (card roughly 40% width, image ~60%, card overlaps image edge). Inside the card, stacked: small brand logo, H1 (two lines), subtitle paragraph. Below the hero: a 3-column meta row (icon + bold label + short paragraph per column).

[ASSET PLACEHOLDER: LOGO-LAZYPAY]

LazyPay brand logo (pink chevron symbol + “LAZYPAY” wordmark in black caps). Approx. 120×24px.

[ASSET PLACEHOLDER: IMG-HERO-3D]

Hero illustration: 3D render of a cute pink chatbot robot (rounded head with antenna, visor face) sitting on a stack of white papers/cards, on a dark near-black background with subtle diagonal line texture; floating gold sphere top-right, small pink 4-point star left, pink disc/ramp base below. Landscape, ~1200×900px.

H1: Building an in-app Chat Assistant

Subtitle: Conversation Design and IA for an in-app automated Help and Support bot that can provide quicker factual resolutions for users and increase customer satisfaction

Meta row (3 columns)

Col 1 — [emoji: notebook] Project Brief: Design the entire end-to-end conversation flow, information architecture, and category tree for an in-app support chatbot

Col 2 — [emoji: hourglass] Duration / Size: 2 months / XL

Col 3 — [emoji: woman-mechanic] My Role: Took ownership of formulating the information architecture, content strategy, and end-to-end conversation design, with support from the designer and PM

Section 2 — Problem, Impact, Rationale

LAYOUT & STRUCTURE

Three stacked centered sub-sections, each: centered emoji icon, centered bold H2, centered paragraph (~700px max width). Bold inline highlights on key figures. The “Why a chatbot” block uses a left-aligned bulleted list centered as a group.

[emoji: memo] H2: Problem Statement

82% of queries (>50K per month on avg.) received by our call center can be resolved with factual information. Our objective is to reduce total number of incoming calls to customer care executives, as well as increase CSAT with a better support experience.

[emoji: money-bag] H2: Business Impact

Targeting even a **60% resolution rate** via chat would lead to a monthly savings of at least **Rs. 700K (INR)**.

[emoji: speech-bubble] H2: Why a chatbot and not something else?

- One-time build cost: Reduced cost of labour force
- Cross-sell benefits: added incentive for users to download our app
- Instant resolutions vs Wait time on phone call / email
- Easier data gathering: to track and analyse conversations for future improvement

Section 3 — Constraints for Phase I

LAYOUT & STRUCTURE

Left-aligned H2 with small subtitle underneath. Then a 5-column row (collapses to stacked on mobile): each column has a large bold number (“01.”–“05.”), two lines of text, and a short black underline rule beneath.

H2: Constraints for Phase I

Subtitle: Based on our timelines, all stakeholders collectively decided on the following

- 01.** Capabilities limited only to Help & Support
- 02.** Use a simple decision tree logic, not NLP
- 03.** Bot has a persona, but no name or avatar
- 04.** Use a third-party vendor, not native
- 05.** Every new chat carries same context

Section 4 — The Process

LAYOUT & STRUCTURE

Centered emoji icon (test tube) + centered H2 “The Process”. Below: 4 equal outlined cards in a row (1px black border, white fill, centered text): bold card title + small paragraph. These 4 cards preview the 4 numbered steps that follow as their own sections.

Card 1 — Gather Research & Data: I first collated all the available data in the system, analysed the results, and used that as the foundation for the next step.

Card 2 — Create Guidelines: Decisions were made with stakeholders to create rules and frameworks for building the tree and common components in the flow.

Card 3 — Test Initial Prototypes: In the spirit of build fast, fail fast I made prototypes for select user queries and tested out the conversation flows.

Card 4 — Build Tree & Final Design: After collecting feedback from the tests, I designed the entire conversation tree, along with the app screens to ensure discovery.

Section 5 — Step 1: Gather Research & Data

LAYOUT & STRUCTURE

Centered blue keycap “1” icon + centered H2 + centered intro. Below: a left-aligned bulleted list (centered as a block) where key research methods are highlighted in pink. Then an “Insights” sub-section: centered brain emoji + H3 “Insights”, left-aligned “Top Issues” heading, and a 3-column stats grid: big bold percentage, bold category name, then 3 example user queries in lighter text. NOTE: in the original this stats area is a horizontal carousel with left/right arrows and dot pagination; a static 3-column grid is an acceptable simplification.

H2: Gather Research & Data

Intro: Collected quantitative & qualitative resources from the UX research team and customer care team, through various methods including:

- Going through **user interviews**, customer care recordings, and transcripts
- Monthly **customer care reports** to identify top issues & their distribution
- **Competitor analysis** of other fintech apps and the language used in their Help & Support sections
- Mapping the **user journey** and creating **mind maps** with the designer and PM

[emoji: brain] H3: Insights — Top Issues

21.1% — Account related: “I want to delete my account” • “Unable to log in” • “My account is blocked”

14.6% — Loans and EMIs: “What’s the status of my loan” • “How many EMIs are left” • “About loan foreclosure”

6.14% — Charges and fees: “What is the latest fee structure” • “Why was I charged interest” • “Need late fee waiver”

Section 6 — Step 2: Guidelines and Framework

LAYOUT & STRUCTURE

Centered keycap “2” icon + centered H2. Then 4 principle rows, each a 2-column layout: LEFT (~35%) small outline icon + bold 2-line statement where the key word is pink; RIGHT (~65%) explanatory paragraph(s). Rows separated by ~48px vertical space.

Row 1 — [icon: smiley outline] Our bot’s tone is **empathetic:** Users who reach out to Help & Support are not usually in a positive state of mind. Emotions can range from slightly annoyed to angry. Hence, the ideal tone for a helpful and reassuring chatbot is warm, friendly, and empathetic, maintaining a professional yet approachable demeanor to create a positive and supportive user experience.

Row 2 — [icon: lightning outline] Our bot should be co-operative and follow **turn-taking:** The information provided by the bot should be relevant, truthful, unambiguous, and just as much as is necessary. The bot must take turns in the same way a real conversation progresses.

Row 3 — [icon: star outline] Each node should have at most **3 options:** Simplify decision-making for a user, while also presenting them with enough choices. This rule applies to every node except the first level of choices (our main menu).

Row 4 — [icon: globe outline] The user must always be in **control:** Only the user gets to end the conversation, not the bot. They always have the option to exit, go back, or restart the flow at any given time.

Section 7 — Step 3: Prototype and Test

LAYOUT & STRUCTURE

Centered keycap “3” icon + centered H2 + centered intro. Then a 2-column block: LEFT a prototype image, RIGHT a titled text card “Information Architecture” (title grey, body grey). In the original this appears to be a slider/carousel of test focus areas; only the IA card is fully visible in the capture. Below: a centered results intro, then a 6-item findings grid arranged around a central phone mockup (3 findings left-aligned to the right edge on the left side, 3 on the right; numbered 1–6). Each finding: bold number, 2–3 lines of text, then a pink outcome tag line. On mobile, stack phone first then findings 1–6.

H2: Prototype and Test

Intro: Before building the entire tree, it was essential to prototype and test our basic hypotheses and insights. We tested the top 3 queries for:

Card — Information Architecture: What is the user’s mental model? Do they seek help based on Use cases or based on Products? What should our top-level categories look like?

[ASSET PLACEHOLDER: IMG-PROTOTYPE-TEST]

Prototype screenshot used beside the “Information Architecture” card: framed phone/mock of the test chatbot prototype (partially cropped in source capture). Portrait, ~800×600px.

Results intro: We tested **2 prototypes**: One with Use Case categories, one with Product categories. Both contained flows for top customer issues. A total of **10 user sessions** were conducted.

1. Users found use case categorisation more intuitive — **Finalised this categorisation**
2. Users like the “Top questions” section — **Positive feedback**
3. Some users wanted the option to type freely (NLP) — **Added to Phase II scope**
4. Suggested an option to raise ticket within app instead of just sharing customer care no. — **Added to Phase II scope**
5. Some users wanted more visual cues along with text — **Added rich media like PDFs, images, videos to answers**
6. Users were comfortable with the interface and format — **Positive feedback**

[ASSET PLACEHOLDER: IMG-TEST-PHONE]

Central phone mockup for the findings grid: black Android-style phone frame showing the tested chatbot prototype UI (white chat screen, pink star accent, back/forward/replay controls at bottom). Includes a small expand icon above and a “Chatbot — Edited 2 years ago” Figma-style caption bar below. Portrait, ~600×1100px.

Section 8 — Step 4: Final tree and designs

LAYOUT & STRUCTURE

Light grey full-width band. A white centered card holds: centered keycap “4” icon, H2, and two intro lines. Below the card, a very wide decision-tree image bleeds across the band, with a smaller zoomed-in flowchart card overlapping it bottom-left (rounded corners, slight shadow). Then the sample conversation: 4 linked columns of chat cards (pink bot bubbles, blue user-selection chips, dashed connector arrows left-to-right), ending with a video thumbnail and action buttons. Then a centered line of copy, followed by a 4-phone gallery row on a decorative contour-line background.

H2: Final tree and designs

Intro: The entire decision tree spanned 5 product lines with interconnected flows, and covers everything from transactions to repayments, and more (image shown to scale). A sample conversation is added below.

[ASSET PLACEHOLDER: IMG-DECISION-TREE]

Full decision-tree flowchart export (FigJam/whiteboard style): dozens of vertical swim-lanes of tiny colored nodes (green, orange, yellow, blue, red) connected by lines, shown intentionally zoomed-out to convey scale. Very wide landscape, ~2400×900px.

[ASSET PLACEHOLDER: IMG-TREE-ZOOM]

Zoomed-in crop of one branch of the tree in a rounded white card (readable node boxes with colored tags), overlaps IMG-DECISION-TREE at bottom-left. ~700×500px.

Sample conversation (4 linked chat cards)

Card 1 — Greeting + main menu (pink bot card): “Hey there! I’m your LazyPay Assistant, always ready to assist you with anything.” / “What can I help you with?” — TOP QUESTIONS: “What is the status of my XpressLoan application?” • “How many EMIs left for my loan?” • “I need help with repayments” • “Unable to repay my dues” • “Unable to transact with LazyPay limit” — **User selects (blue chip):** “I need help with repayments”

Card 2 — Repayments menu: “Of course, we’re happy to help. What do you need help with?” — CHOOSE AN OPTION: “Repaying dues and EMIs” • “Auto-payments” • “Late fees and charges” — buttons: [Go back] [Start over] — **User selects:** “Auto-payments”

Card 3 — Auto-payments menu: “Understood. What would you like to know about auto-payments?” — CHOOSE AN OPTION: “How to set up auto-pay” • “Check status of auto-pay setup” • “Cancel auto-pay setup” — buttons: [Go back] [Start over] — **User selects:** “How to set up auto-pay”

Card 4 — Resolution: “Setting up auto-pay for your dues and EMIs is super easy [emoji] Here’s how:” — checklist: “Go to **Dues** → **Setup Auto-pay** and follow the instructions” • “You’ll need a bank account with net-banking enabled. Keep the login details handy” • “Once the setup is complete, it is sent to your bank for verification” • “We’ll notify you once your setup is approved by your bank. It is usually done in a few minutes.” / “Here’s a quick demo [emoji: point-down]” + [video] — buttons: [Go to Dues] [Thanks, I’m done] [Go back] [Start over]

[ASSET PLACEHOLDER: VID-AUTOPAY-DEMO]

Short screen-recording demo of the auto-pay setup flow, shown as a dark video player thumbnail with a centered play button inside chat Card 4. ~16:9 or app-portrait crop.

App UI gallery

Copy line: The app UI was also finalised by me and the product designer, with a focus on discoverability and comprehension.

[ASSET PLACEHOLDER: IMG-APPUI-1]

Phone mockup 1 — Entry point: LazyPay home screen (dark header with balance Rs.9,750, Help button top-right) with onboarding tooltip “Meet your LazyPay Assistant — Get instant support for your queries and issues” and “Okay, got it” chip; Rs.5 lakhs XpressLoan banner below. Portrait phone frame.

[ASSET PLACEHOLDER: IMG-APPUI-2]

Phone mockup 2 — Help & Support bottom sheet over home screen: “Start a chat” (tag: INSTANT REPLIES; “LazyPay Virtual Assistant can provide instant help on your queries”) and “Browse Help Center” (“Raise a concern or read our FAQs”). Portrait phone frame.

[ASSET PLACEHOLDER: IMG-APPUI-3]

Phone mockup 3 — Chat screen “Chat with LazyPay Assistant”: goodwill message about waiving late fee of Rs. 500, reminder to repay on time, “Is there anything else I can help you with?”, then “Or choose a category” list: My accounts, limits & KYC / Repayments, charges and fees / My transactions / Loans & EMIs (each with colored icon). Portrait phone frame.

[ASSET PLACEHOLDER: IMG-APPUI-4]

Phone mockup 4 — Chat screen showing “Check EMI/Repayment status”: recent repayments list (EMI Payment Rs.6,000 In progress; PayLater Repayment Rs.200 Failed; PayLater Repayment Rs.200 Success; PayLater Repayment Rs.500 Success; etc.) with chips [Show 5 more] [Go back] [Start over], then “Or choose a category”. Portrait phone frame.

[ASSET PLACEHOLDER: BG-CONTOUR]

Decorative background behind the 4-phone gallery: faint grey topographic contour lines on white. Full-width, subtle.

Section 9 — Footer

LAYOUT & STRUCTURE

Centered closing: bold “Thanks for reading!”, then a grey text link “Back to projects”. Site footer: “© 2024 Mohana Das” with LinkedIn and Medium icon links. Update year/links as needed for the new site.

Closing: Thanks for reading!

Link: Back to projects

Footer: © 2024 Mohana Das — [icon-link: LinkedIn] [icon-link: Medium]

[ASSET PLACEHOLDER: ICONS-SOCIAL]

LinkedIn and Medium social icons (small squares, ~24px), footer right.

Build Notes for Replit

LAYOUT & STRUCTURE

1) Build as one responsive page; sections in the exact order above. 2) Replace every pink [ASSET PLACEHOLDER: ID] with the asset supplied under that ID; until then render a light-pink dashed box with the ID label at the stated aspect ratio. 3) Keep all copy exactly as written in the grey blocks (including emoji icons, which are real emoji characters in the original). 4) Currency symbol is Indian Rupee (Rs.). 5) The Top Issues stats and the test-focus cards were carousels in the original; static grids are acceptable. 6) Remove all Wix chrome (banner, “Get Started”). 7) Suggested breakpoints: 5-col and 4-col rows → 2-col at tablet, 1-col at mobile; findings grid stacks under the phone image.
